Designed to work in confined and demanding applications, the Takeuchi TB320 features many advancements in performance and technology that make it an extremely versatile and productive machine. It is easy to transport and well suited for working in a wide range of applications from urban construction sites to areas with limited access such as around businesses, apartments, and homes. A key feature of the TB320 is the hydraulically controlled, variable width undercarriage that can retract to 980 mm and expand to 1370 mm wide. With the undercarriage fully retracted, the machine is able to maneuver easily through narrow passages to get to the work site. Once on-site, the undercarriage can be expanded to provide optimum balance and stabilization.

Available in canopy/cab configurations, the operator's station provides all day comfort with an adjustable suspension seat, large floor area with integrated foot rests, ergonomically designed pilot controls, and adjustable arm rests. The 3.5" multifunction display shows key machine information at a glance.

The TB320 is a conventional tail swing excavator making it a very stable platform that provides excellent lift capacity. It is also available with up to four auxiliary circuits making it easy to add hydraulically driven attachments. The primary auxiliary circuit features best in class auxiliary flow of up to 40 L/min and it is controlled using a proportional slider switch located on the left joystick allowing the operator to meter flow to the attachment.
